17 May is World Telecommunication Information Society Day

Digital technologies have the power to accelerate progress across every sector of society, yet that potential remains out of reach for many. Of the 2.6 billion people still unconnected, the majority are women and girls . Gaps in access and affordability of the internet and digital devices, as well as limited digital skills, continue to hinder the participation of women and girls in today’s economy and in shaping tomorrow’s digital solutions. Bridging this divide is essential to unlocking new pathways for economic growth, innovation, and sustainable development.

World Telecommunication and Information Society Day (WTISD) 2025 highlights the pressing need to advance digital gender equality, so that women and girls everywhere can also benefit from and contribute to digital transformation.

As the world marks 30 years since the Beijing Platform for Action , WTISD-25 is a critical moment to accelerate collective action that ensures digital transformation delivers opportunity for everyone, everywhere.
